

Sublime Structures Project Brief: Crystal Palace Park Information Pavilion

Crystal Palace Park Information Pavilion: Project Brief

To help visitors to Crystal Palace Park understand more about its heritage and importance we propose a series of small 'Information Pavilions' to be sited around the park.

You have been appointed as architects to design the information pavilions which will bring all the fascinating history of the park to life as well as giving information about structures and nature in the existing park.

Your design should be eye-catching to attract people and we would like you to take inspiration from plant structures as Paxton did when designing the Crystal Palace. You could also take inspiration from existing buildings or structures in the park.

Each design team should consider:

- Where will your pavilion be sited in the park?
- Will your pavilion be on the ground, on stilts, in a tree, or possibly underground?
- What information do you want to show? Will it be about the history of the park, the buildings and structures, or perhaps nature and wildlife?
- Will there be another use for the pavilion as well?
- What will the interior be like?
- What materials will the pavilion be made of?
- What will the pavilion look like – think about shapes, colours, decoration, pattern
